

Flashpoint Data-as-a-Service for National Security Organizations

Intelligence for missions that demand agile, comprehensive coverage of publicly available information, threat actors, illicit activity, and global issues

National Security organizations require immediate visibility into real-world threats.

It is vital that organizations have the right data to broaden and enrich their intelligence collection. In doing so, teams receive timely, actionable information, enabling them to make better informed decisions, protect their ability to operate across domains, and rapidly respond to criminal activities.

Flashpoint National Security Solutions (FNSS) Data-as-a-Service directly enables this mission by providing near real-time threat information that empowers organizations to understand, decide, influence, and act. Our full threat intelligence collection enables missions across the attack, defense, influence, and operational spaces.

Flashpoint's approach to identifying, collecting, aggregating and exposing data ensures every user or organization can consume and analyze our data within their organic environment, whether making calls against our search API, or from one of our third party integration partners. Flashpoint's data is available raw or with enrichments which allows the user to query data, submit RFIs, add to collection requirements, and make assessments and decisions, whether their mission is to operate, attack, defense, or influence.

Flashpoint's Data-as-a-Service helps government agencies collect actionable insight and deliver data-driven intelligence to decision makers. Our customers have found success in the information operations, counter-state, offensive and defensive cybersecurity, ransomware, threat finance, election monitoring, blockchain, counter-narcotics, and counterterrorism missions.

BENEFITS

- ✓ Enables organizations to integrate real-time open source information with official reporting, support predictive analysis, compliment geospatial-intelligence, and leverage an effective and omni-potent intelligence platform
- ✓ Provides near real-time access to finished intelligence, normalized data from DDW threat actor communities, and other unique data sets
- ✓ Delivers unique insights and additional context across multiple topics, resulting in faster and more impactful decisions
- ✓ Allows analysts to focus on their mission by alleviating the burden of certain points along the intelligence cycle by logging into multiple platforms

Features

UNIQUE, TIMELY AND RELEVANT INTELLIGENCE COLLECTIONS AND DATASETS

- Publicly available information (PAI) from indexed and unindexed web forums, secure chat platforms, social media, illicit marketplaces, message boards, account and credit card shops, blogs, ransomware sites, and cybersecurity vulnerabilities
- Highly targeted and curated sources focused on cyber-crime, global extremism, drug and weapon trafficking, and other illicit community activities to meet tactical and strategic objectives
- Ability to collect new data sets, including obscure, complex and unstructured data sources

ACCESS FINISHED INTELLIGENCE AND THREAT ACTOR PROFILES

- Access to analytical reports produced by our intelligence analysts, which cover a wide spectrum of illicit underground activity, including crimeware, fraud, emerging malware, violent extremism, and physical threats

ADVANCED ANALYTICS AND AGGREGATION

- Analysts inform proprietary analytics technologies to ensure relevant data delivery and prioritization
- Allows an enterprise or individual user to automate the ingestion of our data sets and highly-enriched indicators of compromise
- Collections from social news aggregation and discussion websites leveraged by both open and deep and dark web communities

DELIVERY VIA FLASHPOINT API

- Delivers high quality data to the user in their preferred method of ingestion which makes the data most relevant to their requirements
- Empowers users with the context needed to enrich and enhance internal data with our targeted data acquired from highly curated sources
- API and data pushes can be customized to support the user's cadence, including the ability to pull near-real time data sets on demand

DaaS Offerings

FLASHPOINT REST APIS DELIVER DATA FROM:

- | | |
|------------------------------|-----------------|
| • Social media | • Card shops |
| • Vulnerability intelligence | • Account shops |
| • Chat services | • Documents |
| • Illicit communities | |

THE FLASHPOINT FIREHOSE DELIVERS DATA FROM:

- Global social media
- Messaging apps
- Defense forums
- Illicit communities
